

1    **ABSTRACT OF THE DISCLOSURE**

2            A light bulb structure includes a closed bulb receiving therein two magnesium  
3    wires connected with each other via a tungsten filament and an insulator connected to  
4    each of the two magnesium wires for separating the two magnesium wires, a closed  
5    lamp shade enclosing therein the bulb and allowing an extension of the two magnesium  
6    wires out of the lamp shade and a mounting base securely connected to a bottom of the  
7    lamp shade and allowing the two magnesium wires to extend out of the mounting base.
